

On behalf of South Ga. Broadcasters, Inc. these comments relate to FCC MB Docket #04232 regarding program content recording proposal. We and other broadcasters in the country that have always abided by and observed the rules to the best of our ability should not be held responsible for the Shock & Awe of broadcasters that push the envelope. Our market is small, our station is a community station serving the wants and needs of our coverage area in a positive way. We have never, nor would we ever forget that we are a citizen where we serve.

This proposal would present hardships on us that we do not need, nor can afford. The economic development potential is limited and unlike the large owners we cannot dictate market conditions, only react to them.

We respect the FCC and accept that they are regulating us in the public interest. Our listening public has never complained about us and we don't intend to give them any reason to, therefore, we should not be held hostage or over burdened because of a few rouges in this public service arena. We are all held accountable and the license we hold is a privilege, not a right. Thank you for allowing one small Broadcaster to join others in requesting you not put financial burden that we do not have the ability to cope with on us. It may not be a problem for the big boys and the metro market guys, but for small market radio, we don't need it. We do a pretty good job of policing ourselves, because we are committed to our area...we live here, have friends here, work here, and go to church here.

Sincerely, Al Graham,
Pres.
